

Autopilot for Testers

Your agent for accelerating every phase of the continuous testing lifecycle

Supercharge productivity for all testers

UiPath Test Suite, the resilient, production-grade automated testing solution powered by the UiPath Business Automation Platform, seamlessly streamlines the testing process so you can deliver applications and automations quickly and continuously at scale. Now, there's a new agent to take your continuous testing to the next level: Autopilot for testers.

Introducing Autopilot for testers

With Autopilot for testers, all testing roles—from developer testers to technical testers to business testers—are equipped with an agent to boost productivity throughout the entire testing lifecycle.

Empower all of your testers to perform at their best with supercharged productivity

Build resilient automations more quickly

Unlock new use cases with AI-powered automation

Leverage Generative AI and Specialized AI to improve accuracy and time-to-value

Boost testing efficiency for developer testers, technical testers, and business testers

Boosting testing efficiency for all roles

Every testing role is equipped with advanced AI capabilities throughout the entire testing lifecycle

Developer Testers

Use source code editors to write & debug complex code for test automation

Studio Desktop
Coded Automation

Technical Testers

Use low-code tools to build custom libraries for test automation

Studio Desktop
Low-Code Automation

Business Testers

Use no-code tools and prebuilt activities for test automation

Studio Web
No-Code Automation

UiPath Autopilot

Supports all three roles with AI-powered testing capabilities

Autopilot
Automation Platform

How does it work?

1

Agentic test design

Evaluate requirements for quality aspects such as clarity, completeness, and consistency, and generate manual test cases, including step-by-step instructions, from requirements, such as user stories and SAP transactions

UiPath Test Manager

2

Agentic test automation

Convert manual tests into coded and low-code automated UI and API tests, generate synthetic test data, refactor test automation, fix validation errors, generate expressions, and perform fuzzy verifications

UiPath Studio

3

Agentic test management

Get actionable and real-time insights into test results, import manual test cases from Excel files in any format, and search projects in Test Manager using natural language

UiPath Test Manager
